## Railo Installer Documentation

The Railo Installer was created with the hope that it would make the deployment of Railo a very simple process. The Installer creates a stand-alone instance of Railo, Tomcat, and Sun's JRE 1.6 specifically for use with Railo. It can be run "by itself" or it can be connected to a pre-installed web server: IIS on Windows and Apache on Linux. This installer also performs the web-server to Tomcat server connections for you, which can be customized at any point after the install to meet your own unique needs.

### Mailing Lists:

If you do not find the answers you are looking for here, we encourage you to post to one of the following Railo Mailing Lists:

- [Railo Open Source Community Mailing List](#)
- [Railo Open Source Community - Beta Mailing List](#)
- [Railo Open Source Community - Prerelease Mailing List](#)
